a spatial light modulator 30 comprising (LCD, page 3 of translation, last line) a plurality of controllable elements located to modulate light from the light source (fig. 1); wherein:

the spatial light modulator has more controllable elements than the light source has light-emitting elements (translation page 3, lines 8-9);

each of the light-emitting elements of the light source is located to illuminate a plurality of corresponding controllable elements of the spatial light modulator; and

the light-emitting elements of the light source each have a number N (i.e. 4, L1-L4, translation page 5) of discrete selectable brightness levels, and the controllable elements of the
